Insurance Claim Request Form — Basic Fields Use Case

Insurance Claim Request & Processing Management — Basic Fields Use Case

1. Aim

To design and build a functional Insurance Claim Request Form in Zoho Creator that demonstrates the correct use of all thirteen Basic Fields available in the Form Builder — Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select and Checkbox — and to generate a Claim_Request_Report that lets the claims team filter, verify and assign submitted claim requests.

This addresses the insurance branch's problem of accepting claims through paperwork and phone calls, which leads to missing policy details, unclear incident descriptions and delays in routing claims by claim type. A single structured online form gives every claim a clean digital record before it reaches a claims officer.

2. Procedure

Step 1: Create the application: A new application named Insurance Claim Request & Processing Management was created in Zoho Creator.

Step 2: Create the form: The Form Builder was opened and a form named Claim_Request_Form was created, organised into four sections: Claimant Details, Contact Details, Claim Details, and Scheduling & Declaration.

Step 3: Add claimant and contact fields: A Name field (Claimant_Name) with First/Last name sub-fields, a Radio field (Claimant_Type: Policyholder / Nominee / Third Party), a Single Line field (Policy_Number), an Email field (Email_Address), a Phone field (Contact_Number) and an Address field (Residential_Address) were dragged onto the canvas.

Step 4: Add claim fields: A Drop Down field (Claim_Type), a Date field (Date_Of_Incident), a Number field (Claim_Amount_Requested), a Multi Select field (Supporting_Documents_Available) and a Multi Line field (Incident_Description) were added to the Claim Details section.

Step 5: Add scheduling and declaration fields: A Time field (Preferred_Callback_Time) and a Checkbox field (Declaration_Of_Authenticity) were added to the final section, completing all thirteen Basic Fields.

Step 6: Configure validations: Mandatory flags, email and phone format checks, a positive-only Number rule, a no-future-dates Date rule and a compulsory declaration checkbox were set in the Field Properties panel.

Step 7: Submit sample records: Three sample claims were submitted through the live form, and the auto-generated Claim_Request_Report was opened to verify that every value was stored correctly.

Step 8: Verify the workflow: Submission was tested end to end: validation on Submit, record creation in the report, the acknowledgement email to the claimant, and filtering by Claim Type and Claim Amount Requested for assignment to an investigator.

3. Output

3.1 Form Builder — Claim_Request_Form with all 13 Basic Fields

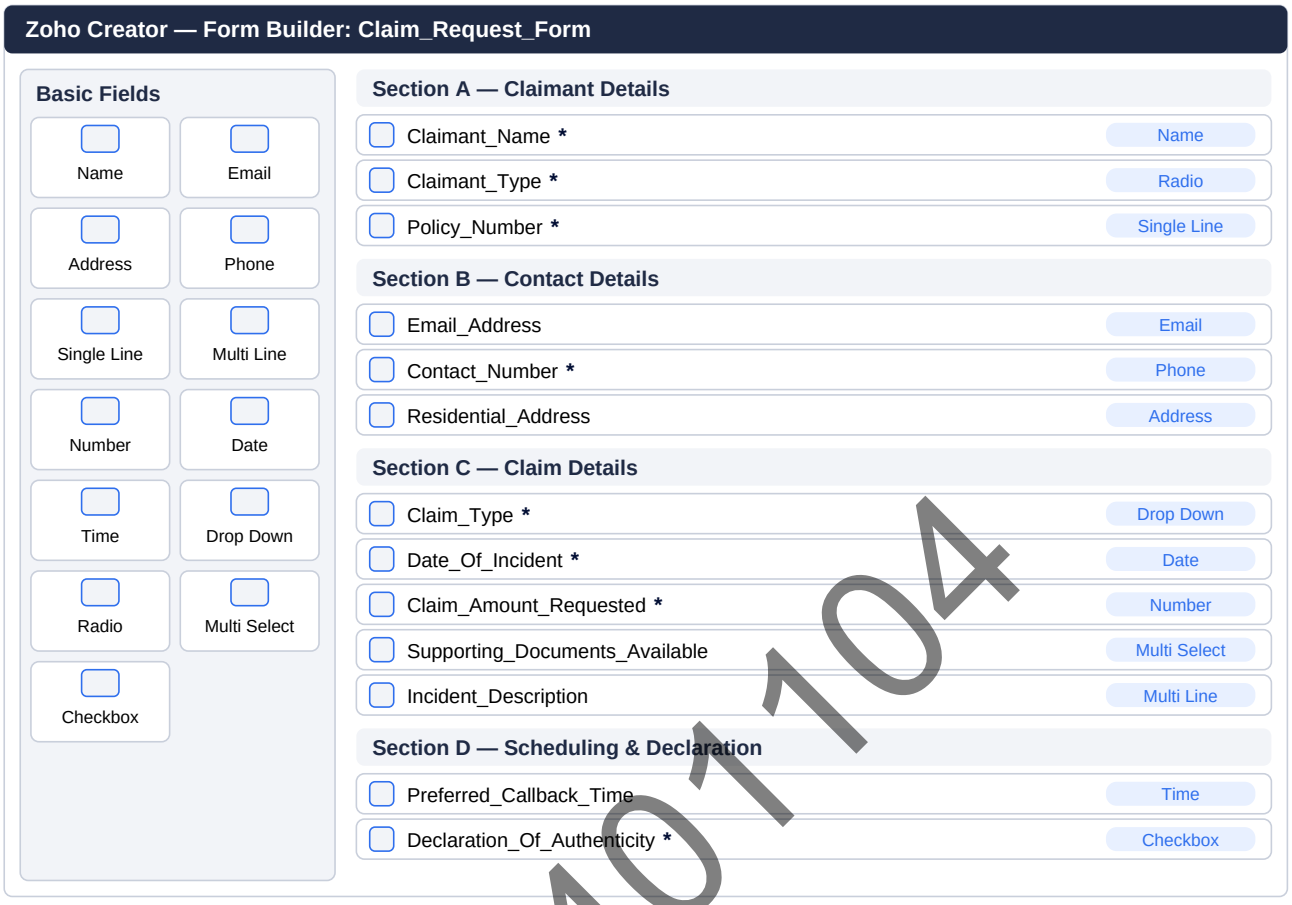

*Fig 3.1 — Basic Fields palette (left) and the four form sections (right); * marks mandatory fields.*

The palette on the left lists all thirteen Basic Fields; each is placed in its section on the canvas and named as specified.

3.2 Field Properties — Validation rules

Rule	Field(s)	Configuration
Mandatory	Claimant_Name, Contact_Number, Policy_Number, Claim_Type, Date_Of_Incident, Claim_Amount_Requested, Declaration_Of_Authenticity	Mandatory enabled in Field Properties
Email format	Email_Address	Built-in email format validation enabled
Phone format	Contact_Number	Country code format enabled for Indian numbers
Positive value	Claim_Amount_Requested	Number restricted to positive values only
No future dates	Date_Of_Incident	Future dates disallowed in the date picker
Declaration	Declaration_Of_Authenticity	Form cannot be submitted unless checked

3.3 Live preview of the Claim_Request_Form

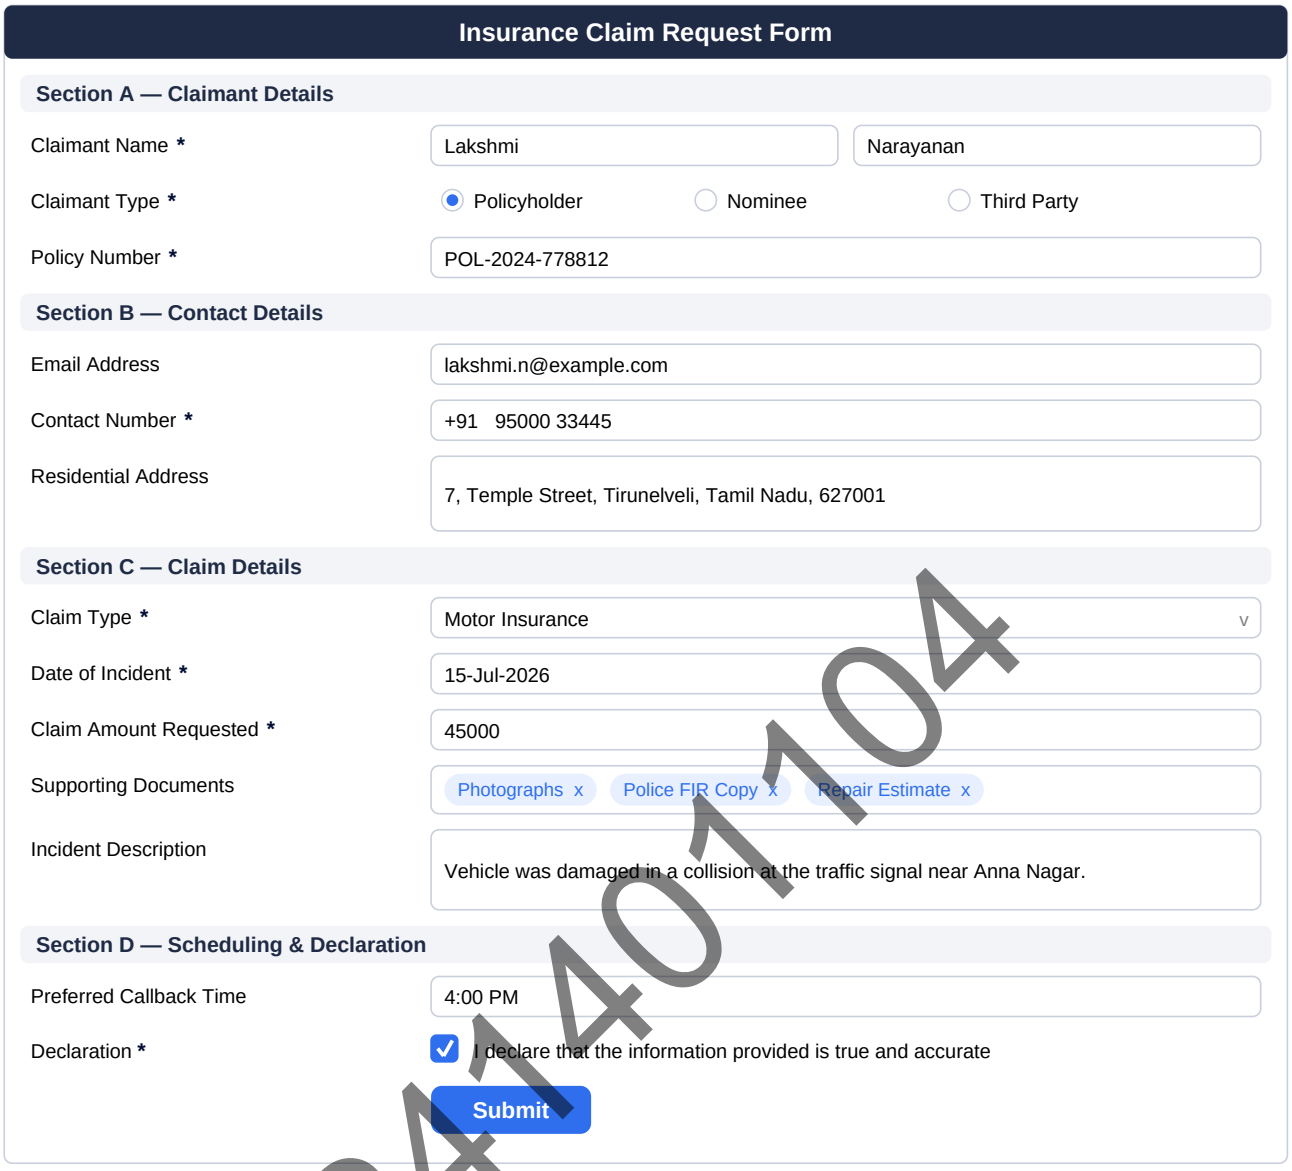

Fig 3.3 — Live form with sample data entered (Sample Record 1).

241401104

The live preview shows how the claimant sees the form. The Name field shows First and Last name boxes, Claimant Type is a single-choice radio group, Claim Type is a drop down, Supporting Documents Available is a multi-select showing the chosen documents, and the declaration checkbox must be ticked before Submit will succeed.

3.4 Report View — Claim_Request_Report

Claim_Request_Report — Showing 1 - 3 of 3

Claimant	Type	Policy No.	Claim Type	Incident	Amount	Callback
Lakshmi Narayanan	Policyholder	POL-2024-778812	Motor Insurance	15-Jul-2026	45000	4:00 PM
Ramesh Kannan	Nominee	POL-2023-445120	Health Insurance	02-Aug-2026	120000	11:30 AM
Priya Sharma	Policyholder	POL-2025-109834	Property Insurance	25-Jul-2026	80000	2:00 PM

Fig 3.4 — Report list view showing the three submitted claim requests.

After submission, Zoho Creator created one record per claim in Claim_Request_Report. The list view allows the claims team to filter by Claim Type and Claim Amount Requested, and opening a record shows every field value exactly as the claimant entered it.

3.5 Claim submission workflow

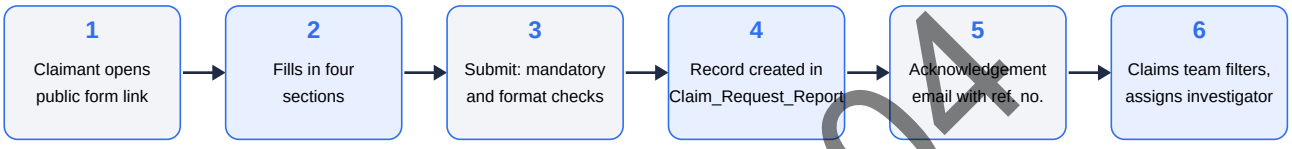

Fig 3.5 — Workflow from form submission to investigator assignment.

The claimant submits the form through a public link, Zoho Creator validates mandatory fields and formats, creates the record, and sends an acknowledgement email using the value in the Email field. The claims team then reviews the report and assigns an investigator who calls the claimant at the Preferred Callback Time.

4. Final Result

A functional Insurance Claim Request Form was successfully built in Zoho Creator using all thirteen Basic Fields: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select and Checkbox. Each field was mapped to a clear role in capturing claimant identity, contact details, policy details, incident information, claim amount, supporting documents and a declaration of authenticity.

The form was organised into four claimant-friendly sections, and field-level validations — mandatory fields, email and phone formats, a positive claim amount, no future incident dates and a compulsory declaration — were configured and tested.

Three sample claims were submitted and verified in the auto-generated Claim_Request_Report, confirming that form values flow correctly into the report used by the claims team.

The exercise met its objective: a paper-and-phone claims intake process was replaced by a single structured, low-code digital form that gives the claims team complete, validated records ready for filtering, verification and assignment.
