1.Zoho Creator AI Application Landing Page

The Zoho Creator landing page presents the platform as AI-native development with enterprise-grade governance. A prompt box lets users describe the app they need in plain language, such as an app that automates insurance claim requests, while the top menu gives access to Platform, Features, Pricing, Solutions and Sign In.

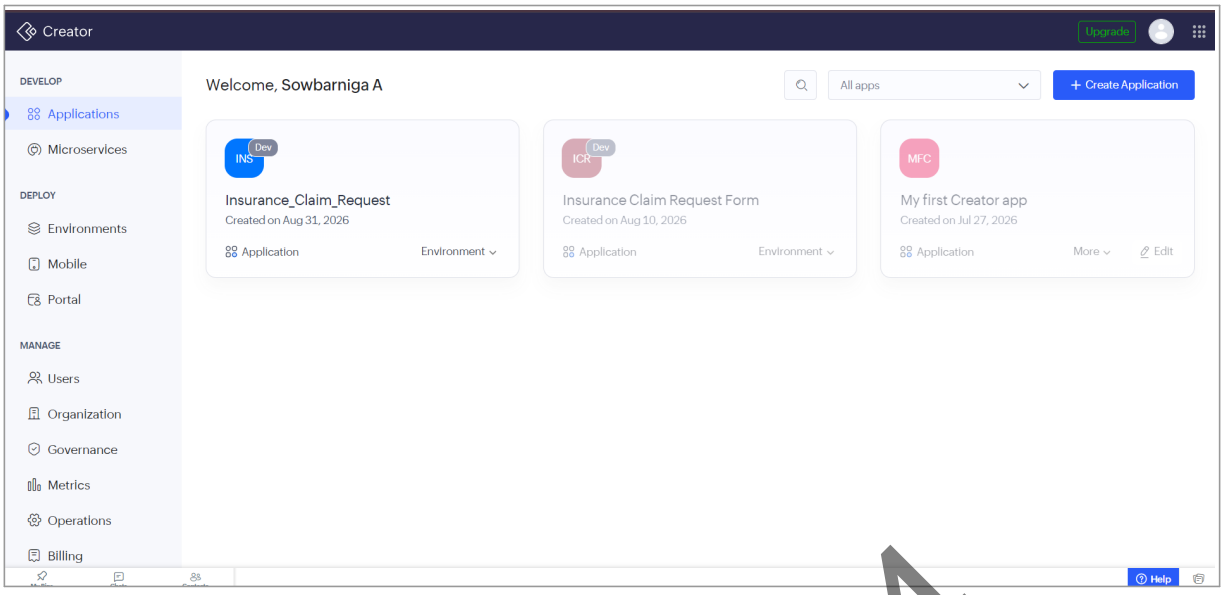

2.Zoho Creator Sign In/Authentication Pool

The sign-in page asks for an email address or mobile number and also offers sign-in through Google, Facebook, LinkedIn, X, Apple and Microsoft. It promotes passwordless sign-in through OneAuth, which keeps access to the workspace secure and effortless. New users can create an account with the Sign up now link.

3.Zoho Creator User Dashboard

Once signed in, the dashboard greets Sowbarniga A and lists the applications in the workspace: Insurance_Claim_Request, Insurance Claim Request Form and the sample My first Creator app. The sidebar organizes everything under Develop, Deploy and Manage, which keeps navigation simple.

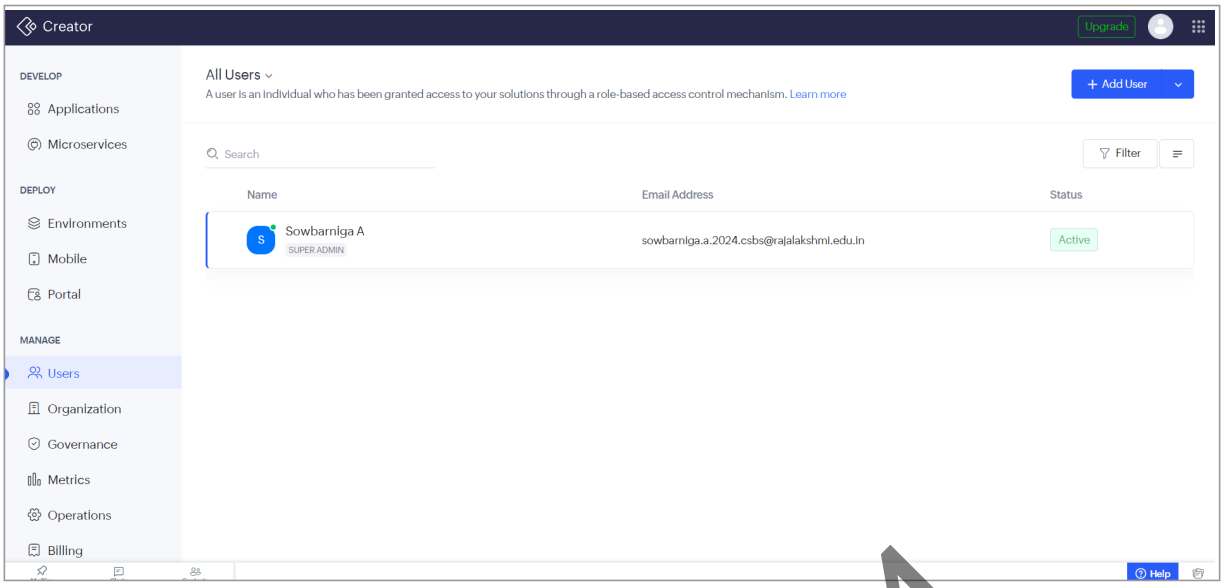

4.Multistage Environment Dashboard

The “Environments” page is a multi-stage deployment space for testing and publishing applications without affecting production. Both insurance claim applications show “Changes available” and are marked “Not yet published” in the Stage and Production columns. Version History, Manage and Publish options are provided at the top.

5.User Management and Role Based Access

The “Users” section lists everyone who has been granted access through role-based access control. Sowbarniga A appears as the Super Admin with an active status. Further users, such as claims intake executives, adjusters and managers, can be added with the Add User button and given role-based access.

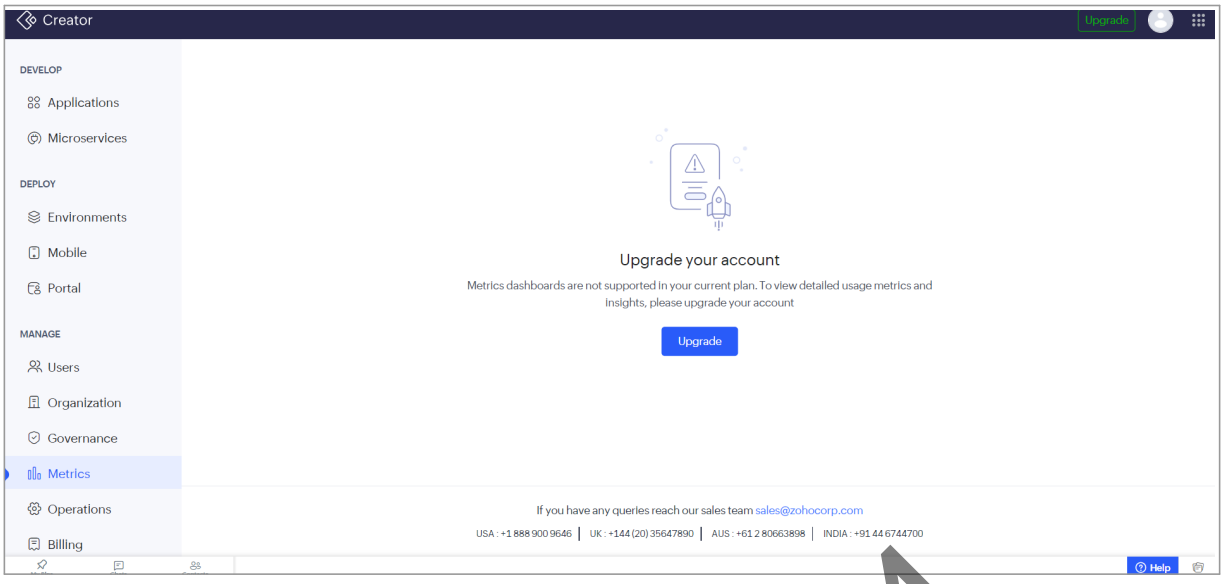

6.Organization Settings and Profile Setup

In the “Organization” tab, users can upload an organization logo and favicon and view contact information, super admin details and preferences. The page shows the organization name and namespace and the time zone, (GMT +05:30) Asia/Kolkata. This gives the workspace its identity while keeping administrative details together.

7.Metrics and Application Analysis Dashboard

The “Metrics” page is meant to give detailed usage metrics and insights into application activity. On the current plan it shows an “Upgrade your account” message, because metrics dashboards are not supported in the free plan. An Upgrade button and Zoho sales contact details are provided.

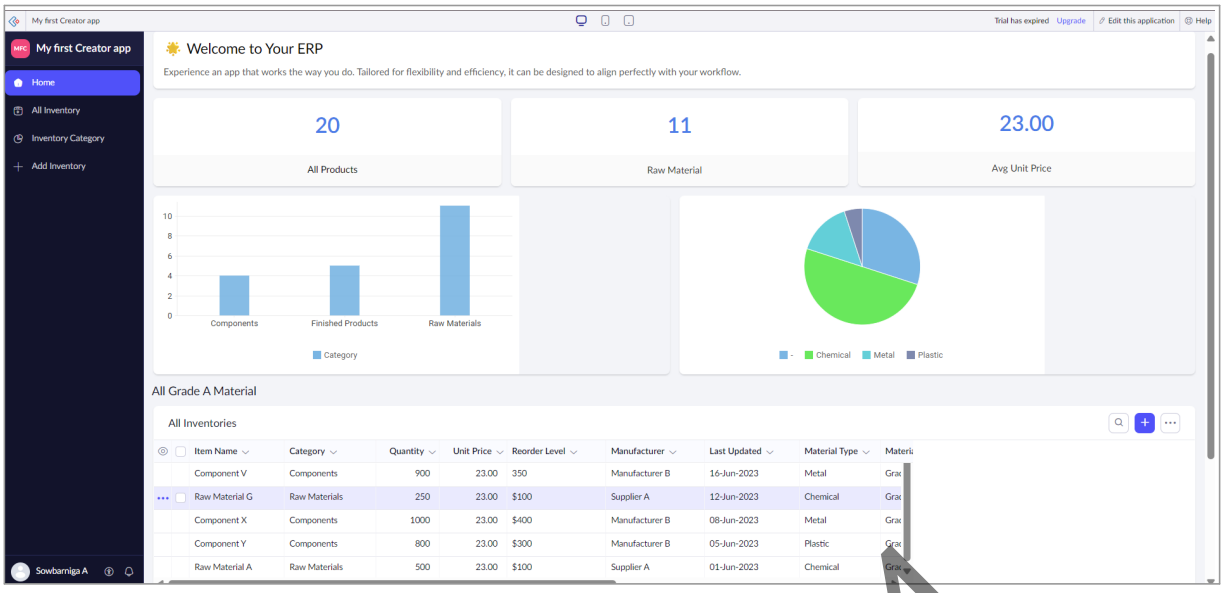

8.Billing and Subscription Management

The “Billing” page shows the active subscription. The account is on the Free Plan, with an Upgrade Now option to unlock the full potential of Zoho Creator. The Plan Details section shows usage against the plan limits (Users 1 of 1 and Apps 1 of 1), so the account stays transparent and easy to manage.

9.Live Custom Application Home Dashboard

Opening an application in access mode shows its home dashboard. This is the sample “My first Creator app”, an inventory app generated by Creator, which summarizes its data with tiles (All Products, Raw Material and Average Unit Price), a column chart by category, a pie chart by material type and an All Inventories table. The header notes that the trial has expired.

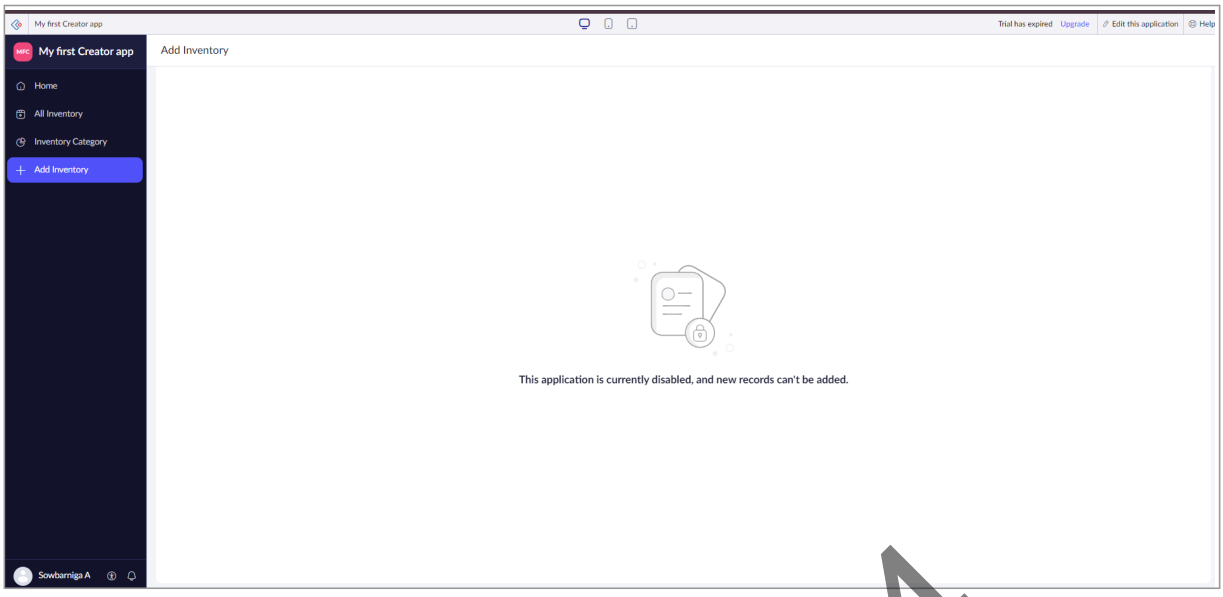

10.Detailed Data Report View

The “All Inventories” page is a report that lists the sample records in detail, with columns such as item name, category, quantity, unit price, reorder level, manufacturer, last updated date, material type and material grade. The footer shows “Showing 20 of 20” records, and search and add options appear at the top right.

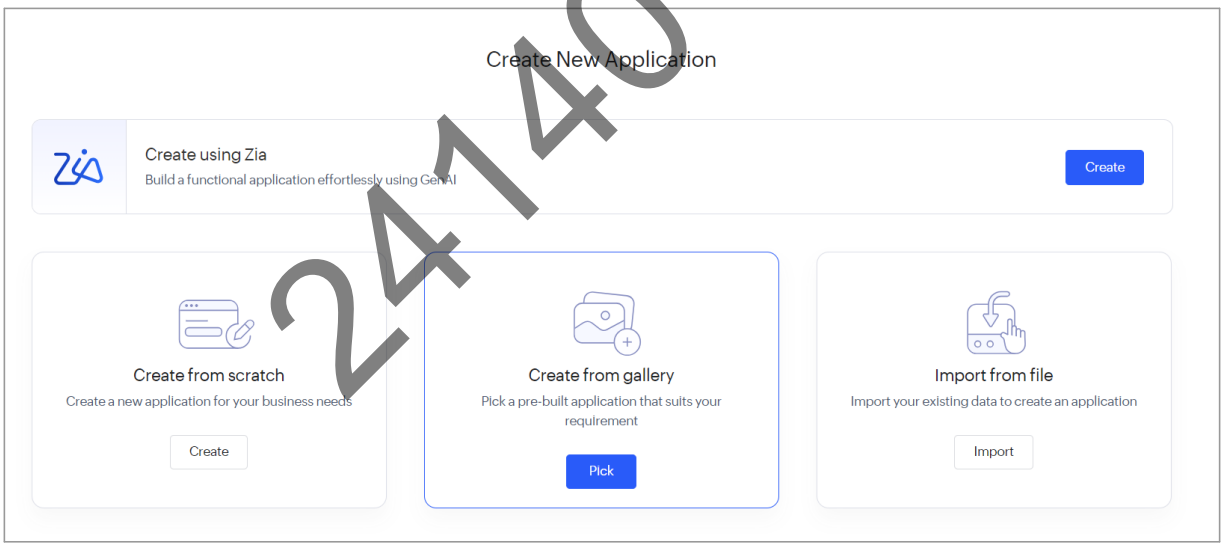

241401104

11.Adding a New Record

The “Add Inventory” menu item opens the form used to add new records to the application. Because the trial has expired, the application is disabled and the page displays a message that new records can’t be added. This shows how the form menu and the status of the application are linked.

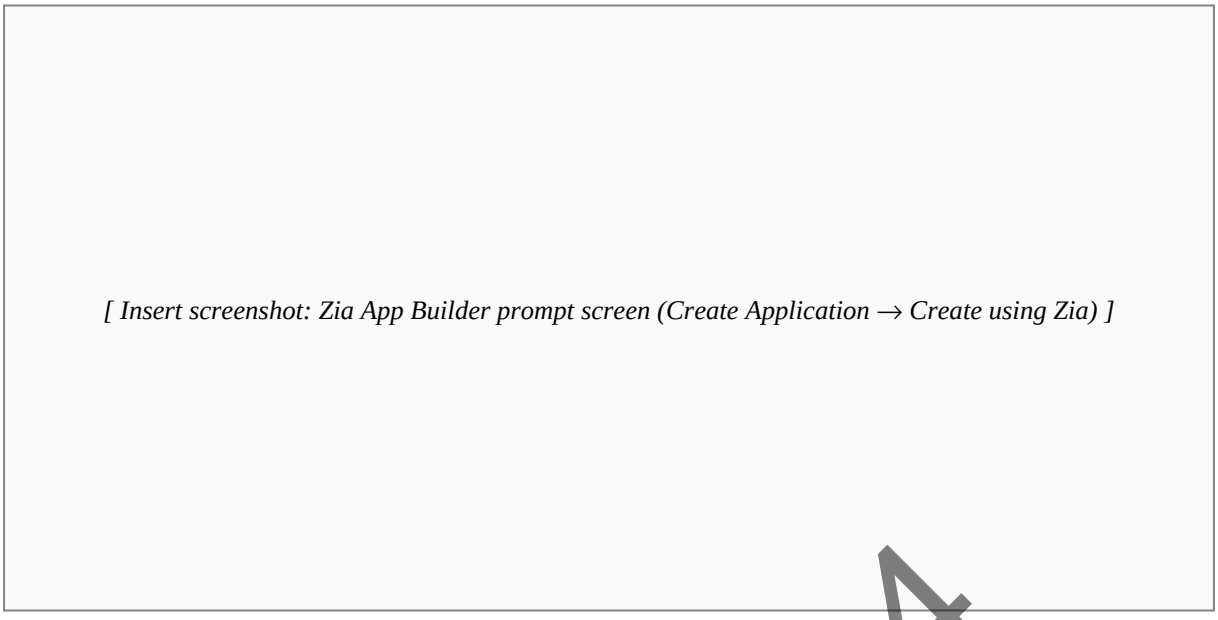

12.Create New Application Options

The “Create New Application” screen offers four ways to start: build an application using Zia (GenAI), create one from scratch, pick a pre-built application from the gallery, or import an existing file. It is flexible and suits both beginners and experienced developers.

241401104

13.Gen AI App Builder Prompt Screen

The “App Builder” page introduces Zoho’s GenAI assistant Zia and invites users to describe their app idea, for example an insurance claim request and approval system, so that AI can help build it. It is minimalistic and emphasizes ease and creativity.
